

When Are You Too Old to Fly?

Age-related changes in cognitive functions essential for flight include perceptual processing, some aspects of memory, and psychomotor control. Cognitive functions not clearly affected by age involve information processing, problem-solving, decision making, and time-sharing. Pilots must be able to assess the possible negative effects of aging. Join us as we offer recommendations for the older pilots. “Prior to attending a safety seminar, please review and abide by current CDC, State and Local health guidelines.”

Directions: The event will be held in the terminal building.
